

ABSTRACT OF THE DISCLOSURE

A fixing member for securing stacked plates is disclosed. According to a major aspect of the present invention, a internal threaded portion is formed within the receiving space of the screw element of the fixing member, and the top flange of the securing set has a corresponding external threaded portion for engaging with the internal threaded portion of the screw element. The purpose such an arrangement is for securing the screw element with securing set at any time and also for separating the screw element from the securing set for replacement thereof with a variety of screw elements, for example, the screw element having an oval head, a Phillips head, a star or hex type as desired.
